

A petri dish containing a bacterial culture on agar, showing a dense, white, fuzzy growth. The dish is placed on a light-colored surface.

# Master's thesis at the Pharmaceutical Biotechnology Saarland University

Would you like to turn your ideas into useful and meaningful research? We are regularly looking for motivated master's students to write their theses in the following subject areas:

- synthetic biotechnology of microorganisms
- discovery and development of bioactive natural products (e.g. antibiotics)
- metabolic engineering driven production of high value added biomolecules (non-natural amino acids)

Please send in your meaningful online application (in a PDF file), including “master's thesis application” to Prof. Andriy Luzhetskyy:

[office.luzhetskyy@uni-saarland.de](mailto:office.luzhetskyy@uni-saarland.de)
